TECHNICAL SKILLS

14+ years of Experience: Power User and Expert in VBA and Excel Macros.

12+ years of Experience: .NET, MS-SQL, Java.

9+ years of Experience: Power BI, Dashboards, Report Automation.

9 years of Experience: ETL Process: Data Collection / Data Validation / Data Manipulation / Data Analytics.

1 year of Experience: Python, R, Google Sheets, Airbyte.

SOFT SKILLS

Analytical Thinking, Problem-Solving, Strategic Planning, Leadership and Team Management

WORK EXPERIENCE

Data Analyst Consultant, HP Inc - November/2023 - March/2024 - Lima, Peru

Provided external consulting services to HP Inc. (formerly Hewlett-Packard). I was responsible for the design and implementation of new client-specific metrics and for training internal staff to manage and maintain these reporting functions.

Faced with new client-specific reporting needs, I developed customized SLA tracking reports using Power BI, SQL, and Excel to enable precise monitoring and meet evolving requirements. To improve stakeholder oversight, I automated SLA performance monitoring processes, delivering detailed, actionable insights. Additionally, I aligned reporting formats with client operational workflows, ensuring that insights were relevant and supported effective decision-making.

Data Analyst, HP Inc - March/2018 - July/2023 - Lima, Peru

HP Inc. is a leading global provider of personal computing devices, printers, and related technologies. With a strong presence in both consumer and enterprise markets, HP is recognized as one of the most important companies in the IT hardware sector worldwide.

Recognizing limited real-time visibility into provider performance, I initiated and developed automated daily reports and dashboards that increased service managers' oversight and contributed to a 5% improvement in SLA compliance (from 89% to 94%). Using SQL, VBA, and business intelligence tools, I designed, documented, and deployed these automated reports in Excel and Power BI to streamline data analysis. I conducted in-depth analysis of support cases to forecast demand and devise effective strategies. To reduce repetitive queries, I supported the implementation of a CHATBOT, empowering end-users to resolve common issues independently. By analyzing ticket data, I identified incident trends that led to targeted actions, reducing service case demand by 20%. I also supervised client-specific services such as disk encryption and secure data erasure to ensure compliance and operational integrity.

Help Desk Supervisor, Banco de Crédito del Perú - January/2015 - March/2018 - Lima, Peru

Banco de Crédito del Perú (BCP) is the largest financial institution in Peru and a key player in the country's banking sector. The bank has a strong focus on innovation and data-driven decision making, using advanced analytics to improve customer experience, risk management, and operational efficiency.

I diligently oversaw operational Service Level Agreements (SLAs), developing and implementing standards and process improvements that ensured consistent SLA achievement. I directly coordinated with service providers to optimize helpdesk operations and led a team of 13 service desk professionals, providing training and mentorship to enhance service delivery. Through effective leadership and motivation, the team surpassed the monthly call answer SLA goal by achieving a 92% success rate versus the 90% target.

Help Desk Analyst, Banco de Crédito del Perú - November/2010 - January/2015 - Lima, Peru

Banco de Crédito del Perú (BCP) is the largest financial institution in Peru and a key player in the country's banking sector. The bank has a strong focus on innovation and data-driven decision making, using advanced analytics to improve customer experience, risk management, and operational efficiency.

I provided end-user phone support, resolving technical issues efficiently via remote assistance. Leveraging VBA skills, I created and automated the measurement of Service Level Agreements (SLAs) with service providers, enhancing monitoring accuracy. I developed a .NET application to streamline office printer connections, which reduced the average number of related support cases by 300, significantly improving productivity. Additionally, I developed automated operational reports distributed daily via email, improving management's visibility of SLA achievements and enabling proactive decision-making.

EDUCATION AND CERTIFICATES

Systems Engineering, University Alas Peruanas

2025 **Python I**, WatSPEED, University of Waterloo

2024 **Python Fundamentals 1**, Cisco Networking Academy

2022 **Microsoft Power Platform Fundamentals**, Intelligent Training

2020 **ITIL Foundation Certificate in IT Service Management**, People Cert / Axelos

2020 **Power BI Advanced**, LinkedIn Learning

2019 **Excel Essential Training**, LinkedIn Learning

2018 **Power BI Essential**, LinkedIn Learning
